

AMENDMENTS TO THE CLAIMS

Claims 1-3 (cancelled)

4. (New) A cordless terminal for connection to computer and communication networks and/or information networks, made up of a data processor, graphical screen, one or more data input devices and a large storage device, the terminal comprising: a mobile terminal communicated in a cordless and continuous manner with a support module, said support module having a power supply source and an outside data communication connection.

5. (New) The cordless terminal in accordance with claim 4, wherein the mobile terminal is made up of a reduced size motherboard with integrated peripheral controllers, and connected to a flat graphical screen that has a tactile screen superimposed for data entry, with its appropriate controller, wherein the large storage device is comprised of a solid state device without mechanical elements where the operating system is placed, and applications to access to user resources in remote computers.

6. (New) The cordless terminal in accordance with claim 4, wherein the mobile terminal and the support module both have a cordless communication module operatively suitable for a permanent remote communication; and wherein the mobile terminal and the support module have common plugs connecting both when said mobile terminal is placed on the support module comprising the common plugs, a recharging connection of the feeding batteries by means of a smart battery, a charger, and a broad band data connection.

7. (New) The cordless terminal in accordance with claim 5, wherein the mobile terminal and the support module both have a cordless communication module operatively suitable for a permanent remote communication; and wherein the mobile terminal and the support module have common plugs connecting both when said mobile terminal is placed on the support module comprising the common plugs, a recharging connection of the feeding batteries by means of a smart battery, a charger, and a broad band data connection.

8. (New) The cordless terminal in accordance with claim 4, wherein the mobile terminal and support module are communicated in a cordless and continuous manner by transmission of radio electric waves or microwaves.

9. (New) The cordless terminal in accordance with claim 5, wherein the flat graphical screen is a liquid crystal display.
